TITLE : TWO-LIQUID MIXING CONTAINER

ABSTRACT : PROBLEM TO BE SOLVED: To provide an improved container with less chance of spilling the liquid content when two liquids are mixed each other.

SOLUTION: A first container 1 is provided with a first container body 1 in which a first neck part 3 is erected and a connection lid 5 to be fitted to the first neck part 3 to which a plug body 10 is tightly fitted in an attachable/ detachable manner to a flow passage hole 7 downward of a cylindrical mount part 6 on the inner circumferential surface of which a female screw 6b is provided, while a second container 15 is provided with second container body 15 having a second neck part 17 in which a first male screw 18a is screwed of the outer circumferential surface of a flange part 18 and a second male screw 19 of reverse thread to that of the first male screw 18a is screwed on the tip part, and a lid body 20 which is provided with an engagement projection 21 on the outer circumferential surface and attached/detached to/from the second neck part 17, a guide projection 7a to be engaged with the engagement projection 21 is projected in the flow passage hole 7, and when the second neck part 17 is screwed into the connection lid 5 while the lid is attached, the lid body 20 is detached into the first container 1 while pressing and detaching the plug body 10.
